

Customer Analytics Management Report

Prepared by: Shayan Najafian

Executive Summary

This report summarizes key customer analytics findings and provides three evidence-based management recommendations.

Key Recommendations:

1. Protect valuable inactive customers

KPI: High-value customers at risk.

Evidence: Some customers have high spending but long periods since their last purchase.

Action: Create targeted reactivation campaigns with personalized offers and measure response rates.

2. Focus marketing resources on high-performing locations

KPI: Total spending by city.

Evidence: A small number of cities contribute a large share of customer spending.

Action: Increase regional campaigns and customer engagement programs in high-performing cities.

3. Evaluate discount strategy effectiveness

KPI: Spending and purchase behavior by discount usage.

Evidence: Discount users show similar spending levels compared with non-discount users.

Action: Use targeted discounts instead of broad discounts to protect profitability.

Note: These findings describe observed relationships and do not prove causation.
