

Top 10 Cities by Total Revenue

At-Risk High-Value Customers

Recommendation 1: Targeted Regional Retention

- **Evidence:** Mashhad and Tabriz show high total revenue but are not the top performers in customer count.
- **Action:** Launch localized loyalty campaigns in these specific high-value regions rather than a nationwide blanket promotion.
- **KPI:** Increase average purchase count in targeted cities by 15% over the next quarter.

Recommendation 2: High-Value Churn Prevention

- **Evidence:** A distinct cluster of high-spending customers has not made a purchase in over 250 days.
- **Action:** Implement an automated "Win-Back" email workflow offering a personalized, high-tier incentive (e.g., exclusive early access) specifically for this segment.
- **KPI:** Reactivate 20% of the identified "at-risk" high-value segment within 30 days.

Recommendation 3: Discount Strategy Optimization

- **Evidence:** Discount usage shows a correlation with total spending but also indicates a potential increase in return rates.
- **Action:** Shift from generic discounts to conditional promotions (e.g., "Spend \$X to get Y% off") to maintain revenue while mitigating return risks.

- **KPI:** Maintain current average order value while reducing the return rate associated with discounted orders by 5%.
